

Question 2 Marked out of 5.00

F Flag

Some C data types, their format specifiers, and their most common bit widths are as follows:

- Int ("%d"): 32 Bit integer
- Long ("%ld"): 64 bit integer
- Char ("%c"): Character type
 Float ("%f"): 32 hit rect
- Double ("%lf"): 64 bit real value

To read a data type, use the following syntax:

scanf("`format_specifier`", &val)

For example, to read a character followed by a double:

char ch;

double d;

scanf("%c %lf", &ch, &d);

For the moment, we can ignore the spacing between format specifiers.

Printing

To print a data type, use the following syntax:

printf("`format_specifier`", val)

For example, to print a character followed by a double:

char ch = 'd';

double d = 234.432;

printf("%c %lf", ch, d);

Note: You can also use cin and cout instead of scanf and printf; however, if you are taking a million numbers as input and printing a million lines, it is faster to use scanf and printf.

Input Format

Input consists of the following space-separated values: int, long, char, float, and double, respectively.

Output Format

Print each element on a new line in the same order it was received as input. Note that the floating point value should be correct up to 3 decimal places and the decimal places.

Sample Input

3 12345678912345 a 334.23 14049.30493

Sample Output

3

```
12345678912345
a
334.230
14049.304930000

Explanation

Print int 3,
followed by long 12345678912345,
followed by forba 334.23,
followed by forba 334.23,
followed by double 14049.30493.

Answer: (penalty regime: 0 %)

1  #include-estdio.hb
2  int main()
3 + {
    int main()
    int number;
    long longnumber;
    char ch;
    float dec3;
    double dec3;
    double dec3;
    double dec3;
    printf("Md \nikld \n
```

Input	Expected	Got	
/ 3 12345678912345 a 334.23 14049.30493	12345678912345 a 334.230	3 12345678912345 a 334.230 14049.304930000	~
